

# Expand Your Service Offering

## We are your Partner to Modernize your Client's Security Infrastructure & Security Operations

- ✓ Scale your business by outsourcing security operations
- ✓ Increase revenue and customer retention by offering security services
- ✓ Rapid deployment of advanced Microsoft security
- ✓ Become a "one stop shop" for your clients

**of companies have already started to, or plan to, adopt Zero Trust security**

**decrease in calls placed to IT and help desk analysts over a 3 year period**

## Zero Trust is based on 3 fundamental principles

### Verify Explicitly

Rather than assuming everything within the corporate network is already protected, the Zero Trust model verifies each request as though it originated from an open network.

### Assume Breach

Our adversaries, nation states and cybercriminals, have sophisticated levels of expertise and resources that have intensified their attacks to unprecedented levels. Their threats persist and you must assume that your environment is constantly under assault.

### Least Privilege Access

Group based policies in Azure AD allow for granular control of access and responsibilities to the right sets of users, giving the least amount of privilege necessary by employing tactics and tools such as Group Based Access, Just in Time Access or JIT, and Privileged Identity Management (PIM).

## Zero Trust is based on 3 fundamental principles

### Verify Explicitly

- Deploy Smart MFA
- Reduce sign-in risks
- Mitigate user risks
- Protect devices
- Create safe zones
- Protect client apps

### Assume Breach

- Managed Detection & Response
- Alert Management
- Monitoring
- Reporting
- Device Compliance
- Employee Risk Scores

### Least Privilege Access

- Group Based Access
- Just in Time Access or JIT
- Privileged Identity Management (PIM)
