

Protect Your Company From Cyber Attacks

We are your Partner to Modernize your Company's Security Infrastructure & Security Operations

- ✓ Mitigate the risk of data breaches and phishing attacks
- ✓ Simplify your cybersecurity infrastructure
- ✓ Control your IT security budget
- ✓ Eliminate the need for countless 3rd party security products
- ✓ Achieve compliance
- ✓ Get deep visibility of your ecosystem and expert analysis from our engineers

50%

reduced risk of data breaches after organizations adopt Microsoft security solutions for their Zero Trust strategies

92%

return on investment just three years after implementing a Zero Trust framework with Microsoft solutions, with a payback period of fewer than six months

Zero Trust is based on 3 fundamental principles

Verify Explicitly

Rather than assuming everything within the corporate network is already protected, the Zero Trust model verifies each request as though it originated from an open network.

Assume Breach

Our adversaries, nation states and cybercriminals, have sophisticated levels of expertise and resources that have intensified their attacks to unprecedented levels. Their threats persist and you must assume that your environment is constantly under assault.

Least Privilege Access

Group based policies in Azure AD allow for granular control of access and responsibilities to the right sets of users, giving the least amount of privilege necessary by employing tactics and tools such as Group Based Access, Just in Time Access or JIT, and Privileged Identity Management (PIM).
